

# British Pharmaceutical Codex

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: ...may be painted on the skin and covered with oiled silk or gutta percha tissue, or it may be mixed with an equal quantity of olive oil and applied with gentle friction or on lint. It is recommended for local application in orchids and mumps. An ointment of methyl salicylate with hydrous wool fat (i in 8) is prepared for use in rheumatism and neuralgia, menthol (i in 16) being sometimes added. Methyl salicylate is used internally in acute and chronic rheumatism enclosed in a gelatin capsule (5 or 10 minims in each). It may be emulsified with mucilage of acacia and given in mixture form, but its taste is pungent and objectionable. It is used as a flavouring agent and as an antiseptic in mouth washes, tooth pastes, and powders. Dose.--to i mil (8 to 15 minims). Note.--Methylsalicylate should be used for application to the skin rather than oil of wintergreen, as the latter frequently causes irritation and may give rise to a rubeoliform eruption.

## METHYLROSANILINUM.

Methyl-rosaniline. Synonym.--Methyl Violet. Methylrosaniline is a mixture of the hydrochlorides of penta- and hexa-methyl-para-rosanilines, formed by the oxidation of dimethyl aniline with cupric salts. It occurs as a green mass with a metallic lustre, or as a greencrystalline powder. Soluble in water (i in 75) and in alcohol (i in 20), the solution having a violet colour, and being decomposed by exposure to light. The colour becomes green in presence of acids. Methyl violet has been employed for the internal and local treatment of malignant tumours; also for cardiac dropsy, and as a local application in diphtheria. As a lotion, a i per cent, solution may be used, a weaker

solution (i in 500) being used as an injection. A dusting powder is prepared with i of methyl violet and 9 of boric acid; this is ap...
