

Immunosuppressive Drugs: Developments in Anti-Rejection Therapy (Hodder Arnold Publication)

This comprehensive new book provides a state-of-the-art review of recent developments in the field of drugs that suppress the body's immune system in response to a transplanted organ, thus preventing rejection. With the current intense interest in these drugs, there is great demand for a book which covers their basic science, effects and results. This book is therefore a much needed addition to the available literature and will be appreciated by all clinicians working in transplant centres, academic and industrial research scientists, and advanced students of immunology and pharmacology.
